

PiNNAcLE For PEAK Yields

Born & Bred in the UK

Pi Pinnacle is the highest-yielding conventional variety across all AHDB regions and fully recommended in the UK. Bred in the Cotswolds by Mike Pickford, the last independent OSR breeder, Pi Pinnacle focuses on staying green and building yield late in the season. By selecting for more pods, higher seed counts, and larger seeds, yields have increased.

Official trials show its vigour and establishment match Campus, with an 8% yield boost. With large seed, it comes in 2 million seed bags treated with Integral Pro and Syllas for optimal establishment.

A medium-height variety, Pi Pinnacle has strong agronomic traits and good autumn vigour, further supported by seed treatments.

Variety type	UK Gross Output	East/West Gross Output	North Gross Output	UK Treated Seed Yield	E/W Treated Seed Yield	North Treated Seed Yield	Oil Content	
Conventional Varieties								
Pi Pinnacle (UK)	Conv	101	101	101	102	102	44.5

Mean of controls		5.1	5	6	4.7	4.6	5	44.8

Pi Pinnacle is medium to late to flower, reducing the risk of flower loss due to late frosts. However it is still medium in grain maturity allowing crops to be harvested before first wheats are ready to cut. The disease resistance of Pi Pinnacle is better than Campus and on the AHDB Recommended List a new rating for Verticillium has been published which states that Pi Pinnacle has intermediate resistance to Verticillium.

Resistance to Lodging	Stem Stiffness	Height	Earliness of Flowering	Earliness of Maturity	Resistance to Light Leaf Spot	Resistance to Stem Canker	Resistance to Verticillium
